			ART UNIT 1614	PAPER NUMBER
			MAIL DATE 01/04/2008	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/667,922	Applicant(s) GOTT ET AL.	
	Examiner Alicia R. Hughes	Art Unit 1614	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 October 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 and 8-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6 and 8-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Status of the Claims

Claims 1-6 and 8-17 are currently pending and are the subject of this Office Action.

Applicant's arguments filed on 26 October 2007 in response to the rejection filed by this Office on 02 October 2007 have been fully considered, but they are not deemed to be persuasive. Rejections and objections not reiterated from previous office actions are hereby withdrawn. The following rejections are reiterated and expounded upon, and they constitute the complete set presently being applied to the instant application.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1, 4, and 8-11 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-2 of U.S. Patent Application No. 10/697608. Although the conflicting claims are not identical, they are not patentably distinct from each other, because they contain identical subject matter and both relate to cosmetic compositions. For example, both disclosed inventions comprising destructure starch that is present in a water dissolvable carrier with a surfactant or emollient where a cosmetic agent is present in overlapping ranges.

Applicant argues that the '608 application "lacks essential features of the present claims 1, 4, and 7-11," because it lacks mention of a solid carrier and fails to disclose fragrance that is deposited onto any form of solid carrier. See Applicant's Remarks of 26 October 2007, page 2, paragraph 3. As noted by this Office prior, however, although a fragrance is not explicitly disclosed as part of the '608 claims, the disclosure advises that "... fragrances ... may also be included in the compositions of the present invention ... these substances may range from about 0.05 to about 5%, preferably between 0.1 and 3% by weight" (Specification, Page 14, para. 43),

Art Unit: 1614

which bring this invention within the total purview of the claimed invention that is the subject of this Action.

Applicant traverses the non-statutory obviousness-type double patenting rejection on the basis that chemically modified starches, which may be either non-gelatinized or pre-gelatinized are quite different from destructure starch and also, that the present set of claims is focused on a solid rather than an emulsion base. The traversal is not persuasive, however, because it is well-understood in the chemical art that destructure starch is produced by heating a chemically non-modified starch material, and it is well-known in the art that cosmetic compositions may generally have a solid, emulsion, or liquid base. *See* Abstract of U.S. Patent No. 5,382,611 [hereinafter referred to as "Steptoe, et al"].

This is a provisional rejection, because the claims have not, in fact, been patented.

Claim Rejections – 35 U.S.C. §103(a)

The following is a quotation of 35 U.S.C. §103(a), which forms the basis for all obviousness rejections set forth in this office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was

Art Unit: 1614

commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6 and 8-17 are rejected under 35 U.S.C. §103(a) as being obvious over U.S. Patent No. 5,925,380 [hereinafter referred to as "Roulier et al"] in view of Müller et al as evidenced by Steptoe et al.

Roulier et al. teach a new dosage form for cosmetic or dermatological use "in the form of an expanded solid composition whose matrix comprises a cellular network formed from a starch-rich product and contains expanded thermoplastic hollow particles of homopolymer or copolymer of an ethylenically unsaturated monomer or mixture of such monomers" (Col. 1, lines 17-23). Importantly, the compositions "have the appearance of expanded cylinders, pellets, leaves or flakes, and can contain a sufficient amount of fillers to obtain good disintegration" (Col. 1, lines 34-37). The compositions can be "stored in the dry state, and be very readily amenable to rehydration after immersion in an aqueous medium to reconstitute formulations for make-up such as make-up foundations or formulations for care or hygiene such as creams, milks, foam baths, gels and shampoos" (Col. 2, lines 25-31). Roulier et al also disclose that the composition most preferably has starches modified in respect of the amylase/amylopectin ratio, such as the product HYLON VII sold by Amylum; and starches modified by crosslinking or modified with a functional group, such as the crosslinked maize starch sold under the name

Art Unit: 1614

RESISTAMYL E2 by Amylum, the weakly quaternized maize starch sold under the name MYPLUS W7 by Amylum (Col. 3, lines 40-50).

Roulier et al also disclose that the composition can also contain cosmetic active agents, such as humectants, that may be present in the final composition in an amount ranging between 0% to 20% (Col. 5, lines 8-14). By way of example, the invention discloses a formulation for dry shampoo wherein maize starch the common name for *zea mays* starch, according to the USDA Natural Resources Conservation Service Plants Database), is present as 35% by weight of the total composition (Col. 6, lines 15-28), and the “matrix comprising a cellular network formed from a starch-rich product represents from 70% to 98% by weight of the weight of the total composition” (Col. 8, lines 1-4, claim 9).

One of ordinary skill in the art would be motivated to combine the teachings of Roulier et al with the teachings of Müller et al, because they teach overlapping subject matter, most notably compositions that include shampoos that are comprised mainly of destructured starch carriers that are water-dissolvable.

Müller et al teach a composition, which has an aqueous phase, for caring for the hair, skin or teeth in which a cleaning action is essential, including for example, “shampoo, shower gel, foam bath, liquid soap, manual dishwashing composition or hair conditioning composition” (Abstract; see also Col. 6, lines 8-13). “The composition according to the invention can be provided in any form, for example, as solution, emulsion, suspension, gel or foam. It can also be provided as a dry powdery composition which is reconstituted in an aqueous medium upon use” (Col. 5, lines 11-15). Müller et al teach that for all embodiments of their invention, can contain “additives selected from preservatives, perfumes, ... sun protection agents ...,” etc. (Col. 8, lines 38-44).

Müller et al also teach that the starch is a spray-dried starch that comprises largely intact starch granules agglomerated to loose aggregates taking on the form of indented spheres where the majority of the granules are whole and unbroken (Col. 24, lines 58-67 through Col. 25, lines 1-4).

Applicant argues that the large distinction that impedes the present analysis from establishing a *prima facie* case of obviousness is that the reference notes pre-gelatinized starches rather than destructurized starches. Applicant also argues that the Office lacks an appreciation for the fact that the instant invention requires that the fragrance be sprayed on to destructurized starch in solid form. These arguments are not persuasive however, because as noted previously, it is well-known in the chemical art that destructurized starch is produced by heating a chemically non-modified starch material or a gelatinized starch (Col. 9, lines 14-41, claims 1-2) and that these forms may take on either solid or liquid forms.

Furthermore, at the time the instant invention was contemplated, it was well-known in the art that one of the problems with starch binders is that they are generally very sticky once dissolved or gelatinized in water. While this makes them generally good binding agents, it complicates the manufacturing process since sheets or articles made using large amounts of dissolved or gelated starch binders have a tendency to stick to the mold or sheet-forming apparatus. On the other hand, unmodified starch granules are generally insoluble in water and merely act as passive particulate fillers in wet systems unless the compositions containing starch granules are heated to above the gelation temperature of the starch, providing the requisite motivation to combine references in this case. See. U.S. Patent Application No. 5,736,209 [hereinafter referred to as

Art Unit: 1614

“Andersen, et al”](Col. 4, lines 44-60). This would provide the requisite motivation necessary to combine the references which make the instant invention *prima facie* obvious.

Finally, while the Applicant argues unexpected results rendered by the utilization of a destructure starch rather than a non-destructured type, based on Example 21, having reviewed the example, the Office is still of the opinion that given the limited scope of the study, the same claim of unexpected results is but an allegation lacking factual support.

In view of the foregoing, it would have been *prima facie* obvious to one of ordinary skill in the art to make a solid cosmetic composition and/or foamed solid cosmetic composition with a zeamays starch base with a deposited fragrance and cosmetic agent.

Conclusion

No claims are allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

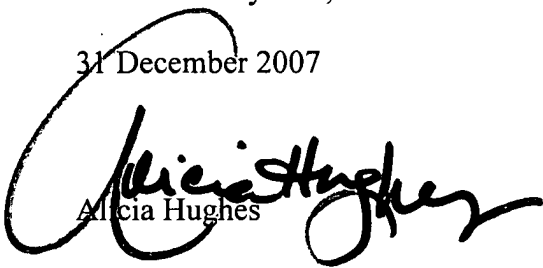

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alicia Hughes whose telephone number is 571-272-6026. The examiner can normally be reached from 9:00 AM to 5:00 PM, Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin Marschel, can be reached at 571-272-0718. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Public PAIR only. For information about the PAIR system, see <http://pair-direct-uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
